

COLLEGE CODERS

React JS Lesson 10 – Conditional Styling (Premium Notes)

1) Inline Conditional Styles

- Inline style can change based on state or condition.
- React style uses object syntax.

Example:

```
<h2 style={{color:isActive ? 'green' : 'red'}}>Status</h2>
```

Explanation:

- If isActive true → green color.
- If false → red color.

2) Conditional className usage

- className can change dynamically using condition.

Example:

```
<div className={isActive ? 'active' : 'inactive'}></div>
```

Explanation:

- CSS class changes based on state.

3) Active & Inactive UI Styling

- Buttons or cards often need active/inactive look.

Example:

```
<button className={active ? 'btn-active' : 'btn'}>Click</button>
```

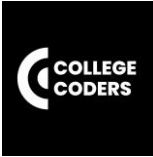

Explanation:

- Active state gives different design.

4) Error & Success Message Styling

- Messages often use color based on result.

Example:

COLLEGE CODERS

```
<p style={{color:error ? 'red' : 'green'}}>
  {error ? 'Failed' : 'Success'}
</p>
```

Explanation:

- Error shown red.
- Success shown green.

5) Mini Project – Active Button

- Button changes style when clicked.

Example:

```
const [active,setActive] = useState(false);
```

```
<button
  style={{
    backgroundColor: active ? 'green' : 'gray'
  }}
  onClick={()=>setActive(!active)}
>
  Active Button
</button>
```

Explanation:

- Click toggles button color.

6) Mini Project – Active Tab

- Tabs change active section visually.

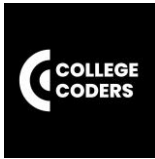

Example:

```
const [tab,setTab] = useState('home');

<button onClick={()=>setTab('home')}>
  Home
</button>
```

Explanation:

- Current tab can get active class.

COLLEGE CODERS

Assignment

- Create active tab component.
- Add error/success message color switch.
- Use className and inline style both.
